

3Key DMR add-on to SignServer Enterprise

Remote digital signing enables users to create and validate digital signatures independent of time and place. Thus, saving time and improving quality compared to normal paper-based processes. SignServer is a great solution for reliable and compliant centralized signing operations. 3Key DMR add-on ensures visibility on enforced security policies for each signature, including who signed what and when.

When providing a signing service, you need to ensure security, compliance, and trust. With SignServer, you can enforce security policies on the server, which can be applied for different signature formats and types, and you can define your own custom signing output format besides the standard ones e.g. PAdES, XAdES, CAdES, MS Authenticode, Timestamps, etc.

The 3Key add-on to PrimeKey SignServer Enterprise for dashboarding, monitoring, and reporting (DMR) provides a comprehensive solution to visualize digital signature operations and its attributes

in time. You can focus on your digital signature service and provide necessary information to IT managers, executives, or your customers. When providing Signing as a service, multi-tenancy helps you to provide relevant data for different usecases and clients without accessing the core of the infrastructure.

3Key DMR Dashboards give you an overview of the overall SignServer operations and health. With zoom in/out and time travelling you can quickly access details you need.

Switch to 3Key DMR Monitoring, and you have a for your operation center, with quick access to information. Identify a particular signing/validation operation or system part efficiently and streamline the incident response procedures to minimizes costs.

Prepare and distribute Reporting. There is a different information requirement when you need to report the SignServer operations to your customers or your management. All of these are now easily configured in the 3Key DMR add-on and scheduled to be distributed on a regular basis.

With properly defined and executed monitoring you can configure alerts, people to notify and actions can be taken. This is useful when keeping track of security sensitive changes in the infrastructure, such as changes in algorithms or policies.

You can optionally use machine learning and react on unpredictable situations, which protects you from unexpected outages and failures.

3Key DMR add-on to SignServer provides you with all you need for effective remote signing solution management. It is available for SignServer Software

Benefits

See all signing and system operations

Regardless of when you start using the 3Key add-on.

Out-of-the-box deployment

Use pre-defined and tailored templates or define your own.

Dashboards

Get the overview you need on activities within your signing solution.

Monitoring

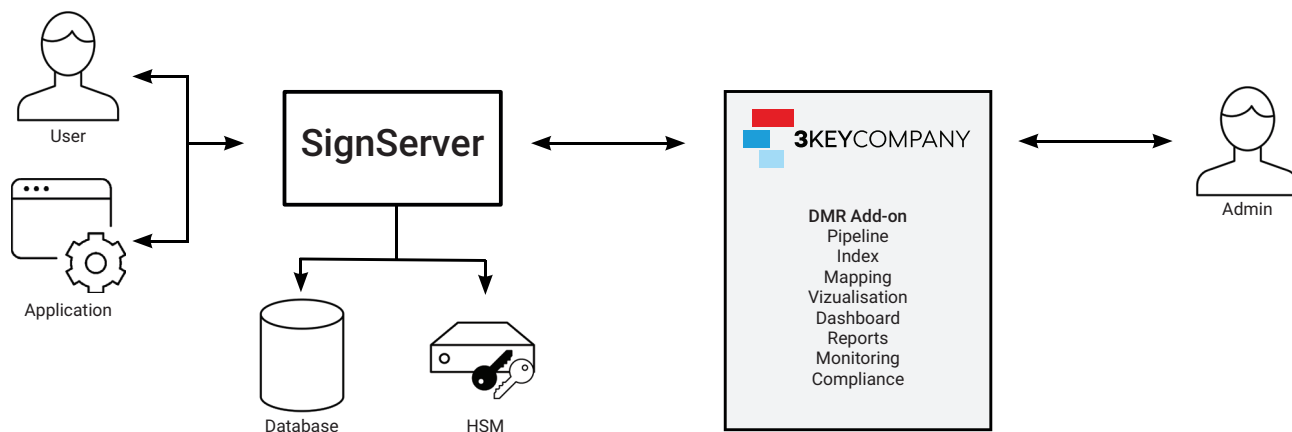

Enable real-time monitoring of signing attributes or system performance in one place.

Reporting

Predefined and customer reports available.

Alerting

Define and schedule alerts to be aware of changes and sustain compliance.

About 3Key Company

3Key Company possesses a great ability to apply knowledge, experience, and skills to create unique solutions that anyone can rely on. The focus is put on information security, data intelligence, and consulting. 3Key Company helps to streamline business activities and protect critical assets. Trusted and recognized professionals with innovative technologies can show you how to improve performance and reduce costs.

About PrimeKey

PrimeKey is one of the world's leading companies for PKI and digital signing solutions. Deployed as software, appliance or cloud, our products EJBCA and SignServer deliver the capability to implement an enterprise grade PKI system ready to support solutions such as IoT, e-ID, e-Passports, authentication, digital signatures, code signing, digital identities, and validation; all solutions where digital certificates would be a main enabler.
